The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerasae chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical magning of sites expressing (II). (I) and (II) are useful in medical activity. The polypeptide and polynucleotide sequences have applications in disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and cond sequences. A&Sé4197-A&S4564 represent novel human caid sequences and for his patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        471
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   834
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     854

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain readrion (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The for identifying expressed genes. (I) is useful in gene therapy techniques of for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its sum and successed generating antibodies against in medical imaging of sites expressing (II). (I) and (II) are useful in medical (II) and its binding partners are useful in medical (II) and its binding partners are useful for treating can soor stock in special and polynucleotide sequences have applications in cresponsible for generatic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences. AAS64167-AAS4464 represent novel human and when the now of the new or the second human and sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

Antigenic Porphorymonas gingivalis peptides for preventing gingivitis Claim 12; Page 222-223; 588pp; English.	do Oy	931 CGGCAGAAA 939 509 ArgValLeuAlaIleAsnHisAspAspGlyValAsnArgSerIleLeuGlyArgIleSer 528
AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAX34318 to AAX34583. AAX31802 to AAX91809 represent PCR primers used in the solution of the PG polypeptides. The PG polypeptides have antibacterial	Db Oy Db	940
used as vaccines especially against Porphorymonas gingivalis. Probes can be used as vaccines especially against Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.	QY

Porphorymonas gingivalis (PG) polypeptide sequences given in AAY34318 to AAY34893. AAX91802 to AAX91899 repersent PGR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines sepecially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ProLeuLeuIleGlyAspValPheHisHisGlyLysTyrGluThrLysLysAsnLeuIle 319

                                                                                                                                                             The present sequence is a putative version of the Neisseria meningitidis strain ATCC13090 BASB040 coding sequence. The protein produced from this gene is similar to the D15 outer membrane protein of the bacterium. The gene, its protein, antibodies, antagonists and agonists can be used to diagnose and treat bacterial diseases such as those leading to upper respiratory tract infections, bacteraemia and meningitis. In addition, they can be used in vaccines for use against

The present sequence is a putative version of the Neisseria menighidis strain ATCL3090 BASB040 coding sequence. The protein produced from this gene is similar to the D15 outer membrane protein of the bacterium. The gene, its protein, antibodies, antagonists and agonists can be used to diagnose and treat bacterial diseases such as those leading to upper respiratory tract infections, bacteraemia and meningitis. In addition, they can be used in vaccines for use against

AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ55473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves may also have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AA253015 to AA254536, AA254577 to AA254615, and AA774253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54577 to AAZ54576 and AAZ54516 to AAZ55473 represent polypeptides. AAZ54577 to AAZ54576 and AAZ54516 to AAZ55473 represent polypeptides. The polypeptides, antibodies and composition. The polypeptides, the polypeptides, and as immunogenic compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves may also be used in gene therapy protocols.
                                                                                                                                                                                                                                            Neisseria meningitidis; Neisseria gonorrheae; antigen; vaccine; antigenic; diagnosis; immunogenic; infection; meningitis; septicaemia; antibacterial; gene therapy; ds.

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA81453 to AAA82414

Proteins from Neisseria genomic sequences. AAA81453 to AAA82414

represent specifically claimed Neisseria meningtidia genomic DNA sequences; AAA81260 to AAA8120 and AAB25620 to AAB2563 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and AAA81304 to AAA81321 represent PCR primers used in the isolation of Neisseria meningtidia DNA sequences; and AAA8132 to AAA81452 represent Neisseria meningtidia DNA sequences; and AAA8132 to AAA81452 represent Neisseria meningtidia MenB polynucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all serotypes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and/or against all pathogenic Neissaniae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious Meningococcus B vaccines have failed mainly due to antigen tolerance. Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than
                                                                                                                    Scarlato V;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 38451 AGTGAAATCAAAGATATGGTCGAAGAACACCTGCCGCTCATCACGCAGCAGCAGGAAGAA 38510

The present Arreltion describes the full femyling yellow.

Neisseria meningitidis B (NMB). The sequences in AAPZ1544 and AAFZ1607

to AAFZ1613 represent fragments of the NMB genomic sequence, as the sequence was too long to go in a record on its own it was split into 8 sequences which overlap each other at the beginning and each of each sequences which overlap each other at the beginning and each of each sequence by 49980 bp (i.e. the last 49980 bp of AAFZ1544 is repeated at the beginning of AAFZ1609, and so on). AAFZ1545 to AAFZ1588 encode the Neisseria proteins given in AABS8550 to AABS8593, and AAFZ1589 to the present invention. The NMB genome and fragments from it have attabacterial activity, and can be used in vaccines and gene therapy.

Neisseria nucleic acids, proteins and/or antibodies which binds to the proteins can be used in compositions for treating or preventing infection due to Neisserial bacteria or of antibodies raised to Neisserial activity, and as adiagnostic reagent for detecting the presence of Neisserial bacteria or of antibodies raised to Neisserial activity of a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antiganic or immunogenic proteins which are more effective in vaccines than the outer membrane proteins currently used. present invention describes the full length genome of

Also described is a method for producing a desired protein in a bacterial host cell, comprising: (a) transforming a bacterial host cell, which comprising a first nucleotide sequence selected from the vector comprising a first nucleotide sequence selected from the group of 14 Methylococcus capsulatus, and comprising a nucleotide encoding the desired protein linked in frame to the first nucleotide sequence; and (b) culturing the transformed host cell in a medium under conditions that allow the expression of the protein. (I) can be used in vaccine production. The nucleic acids or the proteins from the present invention can be used in manufacturing vaccines that can be administered in animals, fish or humans. The method is useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     fish
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a nucleotide molecule (I) comprising a

```
The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABO90016-ABO91855 represent M. capsulatus genes for use in arrays of the
                                                                                                         wovel DNA array useful for determining differential expression of Methylococcus capsulatus genes, comprises polynucleotides or oligonucleotides representative for a selective number of Methylococcus capsulatus genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               248

This invention describes a novel preparation of an agent (A) for detection, prevention and/or treatment of microbial infection by:

(i) identifying essential genes (I) and corresponding polypeptides

(II): (ii) identifying essential genes (I) and corresponding polypeptides

(II): (iii) identifying compounds that are directed against (II) and inactivate the microbe; (iii) testing these for sultability for use; and corresponding selected (A). Identifying essential genes (I) comprises preparation of gene-deficient microorganisms by conditional antisense inhibition of gene-deficient microorganisms by conditional antisense inhibition (AI) and/or survival of the deficient organisms. The products of the invention have antibacterial activity. (A) (which may be a nucleic acid (Ia), vector or host cell containing (Ia), derived polypeptide (IIa), or fragments. (IIa)-specific antibodies or their collypeptide (IIa) are used in DNA, subunit or live vaccines. The method infection by Halicobacter pylori: Particularly conditions are used in DNA, subunit or live vaccines. The method identifies essential genes, including those that have homologs in other species, so identified (A) should have a broad spectrum of activity. Many gene-deficient cells can be screened quickly, in an automated process, and the identified genes can be used for screening without purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preparing an agent for diagnosis or control of microbial infection, useful particularly against Helicobacter, based on identification of essential genes in defective mutants -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Microbial infection; antibacterial; Helicobacter pylori infection; vaccine; screening; ds.

This sequence encodes a H. pylori cell envelope outer membrane protein having a terminal Phe residue.

The protein having a terminal Phe residue.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, infection or to identify H. pylori life cycle activators or inhibitors. The company probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori infection. Nucleic and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for computer evaluation. To identify likely H. pylori antigens for vaccine development, the aminon acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of membrane proteins. Having identified and determined the sequences of miterest, particular regions can be isolated from H. Pylori B. P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pylori
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                e.g.tin E.
inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis; cell envelope outer membrane protein; OMP; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide(s) - useful in vaccines to treat or prevent H. infection and for diagnosis of H. pylori infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Helicobacter pylori nucleic acid sequences and encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               681 G; 770 T; 0 other;

The invention relates to a vaccine for preventing or treating infections by Helicobacter pylori. The vaccine contains at least one isolated the pylori polypeptide, or its fragments, in a carrier, where the carrier is a Salmonella, vibrio cholerae or Shiqella vector containing a nucleic acid encoding the H. pylori polypeptide. The vaccines induce humoral and cellular immune responses. The vaccines are used to treat or prevent infections by H. pylori. Sequences AAX75779 to AAX75837 represent nucleic acid sequences encoding H. pylori outer membrane polypeptides (OMPs) AAX17160 to AAY17218.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GATATGGTGGATTCTAAAAAATAGACACCGCTGTTTTAGCTTTGTTCAACCAAGGGTAT 378

Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding aa sequences were derived (AARS754-89. D15 OMP can be produced easily and on a large scale, free of other antigens and lipooligosaccharides, by recombinant DNA methods using the isolated genes.

English.

polypeptide (II) sequences. (I) is useful as hybridisation probes,

C polymerase chain reaction (PCR) primers, oligomers, and for chromosome
and gene mapping, and in recombinant production of (II). The
polymucleotides are also used in diagnostics as expressed sequence tags

C to identifying expressed genes. (I) is useful in gene therapy techniques

C to restore normal activity of (II) or to treat disease states involving

C (II). (II) is useful for generating antibodies against it, detecting or

C quantitating a polypeptide in tissue, as molecular weight markers and as

C a food supplement. (II) and its binding partners are useful in medical

imaging of sites expressing (II). (I) and (II) are useful for treating

C disponders involving aberrant protein expression or biological activity.

C diagnostics, forensics, gene mapping, identification of mutations

C responsible for genetic disorders or other traits to assess biodiversity

and to produce other types of disorders or other traits to assess biodiversity

C and to produce other types of the invention.

C and to produce ada for this patent did not appear in the printed

Specification, but was obtained in electronic format directly from WIPO

C at ftp.wipo.int/pub/published\_pct\_sequences.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical

Outer membrane protein (OMP) D15 genes were isolated by screening chromosomal libraries of H. influenzae type b (Hib) strains Ca. Eagan and Minn A, and the non-typeable (NTHI) strains SB13 and PAK 12085. Nucleotide sequences were determined for the D15 genes (AAQ66198-202) and the corresponding as sequences were derived (ARRS1784-89). D15 OMP can be produced easily and on a large scale, free of other antigens and lipooligosaccharides, by recombinant DNA methods using the isolated genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     179 LysValProArgLeuLysAlaLysPheTyrGlnSerSerGlnSerGlyGluThrSerAla 198
